

Brainstorming & Idea Prioritization Template

Date	1 July 2026
Team ID	
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Gayatri Pothula	Collect a flood prediction dataset (annual rainfall, cloud visibility, seasonal rainfall, meteorological parameters) from Kaggle	Data Collection	1
2	Rupa Venkata Naga Lakshmi Maddasani	Train and compare multiple classification models: Decision Tree, Random Forest, KNN and XGBoost	Model Building	2
3	Himareshma Neeli	Perform EDA using univariate/multivariate analysis, distribution plots, box plots and heat maps to study feature patterns	Data Analysis	3
4	Savitri Mudula	Build a Flask web application with Home, Prediction Input, Flood Chance and No Flood Chance result pages	Web Application	4
5	Naga Shreya Chimakurthi	Deploy the trained model and web app on IBM Cloud for scalable, anywhere access	Deployment	4
6	Gayatri Pothula	Save the best-performing model (XGBoost) and scaler as floods.save for reuse in prediction	Model Building	2

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Collect and preprocess the flood dataset (rainfall, cloud visibility, seasonal rainfall) from Kaggle	High	High	1	Yes
2	Train, evaluate and select the best classification model (XGBoost achieved 96.55% accuracy) and save it	High	High	1	Yes
3	Conduct data visualization and analysis to understand patterns, correlations and outliers	High	Medium	2	Yes
4	Build and deploy a Flask web application on IBM Cloud for real-time flood risk prediction	Medium	High	1	Yes
